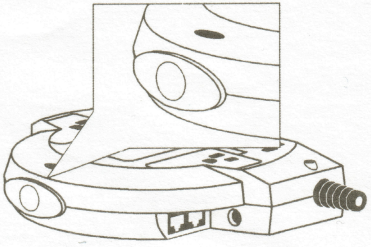
Switch Guard Installation

Note: Recommended for use on the master on/off switch to prevent accidental turn-off.

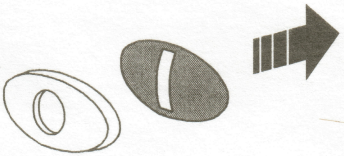
1

Make sure that the SurgeStation's power button is in the "OFF" position. The button should protrude slightly from the front of the unit.



2

Remove the colored backing from the switch guard to expose the adhesive-coated edge. Do not touch the adhesive.



3

Using the protruding button as a guide, place the guard over the button and press it to the front of the unit. Make sure that the button works properly.
